Please give us feedback, as any information on the forum would be greatly appreciated. In the future the community and the development team will create an option to toggle USB detection on and off in the GUI. In addition, a "Custom" button will be added to allow you to configure all aspects of the GUI. Unrooting process Now on the "unrooting" process, we are implementing a GUI option to choose between "Unroot" and "Backup+Unroot". You can choose one of the two options and after a few seconds, they will run in parallel. However, you should choose carefully, as any unsuccessful attempt to unroot will render your device unusable until it is fixed. On the first boot, it will be necessary to install the boot.img, recovery.img and boot.qst files in the fastboot folder of the hard drive and the recovery.img in the recovery folder, because "boot.img" is supposed to load with "boot.qst" in the recovery mode.
